SOCAL BIOAMENDMENTS

Healthy microbes, grow healthy plants.

How it works

Give every new plant a healthy start.

Microbes are critical to the health of your plants. The installation process disturbs the soil and often eradicates the microbes your plants need. By restoring beneficial microbes to the soil, you are giving each plant exactly what it needs. Chemical fertilizers, on the other hand, hurt the microbes even more.

Two simple enhancements for healthier plants

Choose either option, or pair them for a complete microbe-rich start.

1

Microbe-Rich Compost

Added at planting

Microbe-rich compost is placed in the root zone as each plant is installed, bringing healthy microbes into direct contact with the plant's rhizosphere.

\$1
PER PLANT *

2

Microbe-Rich Liquid Extract

Applied after mulch

Fresh liquid compost extract is applied after irrigation is installed and mulch is down, spreading healthy microbes through the finished root zone.

\$3
PER PLANT *

Complete microbe-rich start

Compost + extract

\$4 PER PLANT *

Ongoing Treatments: Year 1: 3-4 treatments | Year 2: 2 treatments | Year 3+: 1 per year

An added layer of care for your landscape.

Contact SoCal BioAmendments for information about microbe-rich compost or liquid extract for your property

** Average application rate. Small plants need less and large plants may need more*
